- : Support user customization function and interactive (non-face-to-face request) function

# **Admin Menus**

#### - User can do editing a project in a Admin Menus. Belows are about admin menus

| Menu Name     | Description   |
|---------------|---|
| Pages         | Page is a static contents what user create. We support some page types such as Single page, Archive page, order page, cart page, TV Channels page, mypage. Using pages user can do manage pages, like show all pages, add new page, categories mana gement.   |
| Posts         | Posts menu is for managing contents data. We support basic contents type such as Local Activities, Guest Service, Eat & Drink, Event & Promotion, Tours & Tickets, Products, VOD. On this menu user can manage posts, like show all posts, add new post, ca tegories management, tags management, content types management.                               |
| TV Channels   | TV Channel menus is for managing TV Channel post data in contents. This is can be rendered on TV Channels page. On this m<br>enu user can do manage TV Channel post data which is used for display TV Channel information, like channel number, channel<br>icon. This menu also supports show all TV Channels, add new TV Channel, TV Channel categories. |
| Custom Fonts  | Used to manage custom fonts, like show all custom fonts, add new custom font.   |
| Products      | When clicked, it'll redirect to Product Store which manages products info.  |
| Appearance    | Menus for basic customization for project. User can customize first page of the contents and manage menus which is showing on first page or in page. And also enter a CSS editor which is using for changing content's style on overall the project.  |
| Tools         | Used to export/import current project data.   |
| Settings      | Used to manage common settings, like Site Title, Site Language, Country, City, etc.   |
| Collapse Menu | Used to show or hide the whole admin menus.   |

# **Content Types**

# **Content Types – Default Content Type**

Default content type has predefined meta info. Based on this meta info, Contents will be rendered. User can add more custom meta information on using custom fields

#### There are seven default content types:

Local Activities, Tours & Tickets, Eat & Drink, Event & Promotion, Guest Services, Products, VOD

| Meta Info             |                    |                   | Meta Info             |        |
|-----------------------|--------------------|-------------------|-----------------------|--------|
| Content Type          | Local Activities 🗸 |                   | Content Tune          |        |
| Featured image        | Browse             |                   | Content Type          |        |
| j_                    | browse             |                   | Featured image        | Browse |
| Prominent info        |                    |                   |                       |        |
| Distance              |                    |                   | Video Name            |        |
| Duration              |                    |                   | Description in short  |        |
|                       |                    |                   |                       |        |
| Description in short  |                    |                   | Description in detail |        |
| Description in detail |                    |                   |                       |        |
|                       |                    |                   |                       |        |
|                       |                    |                   |                       |        |
|                       |                    | //                | Video Source          | Browse |
| Image gallery         | Browse             | Mata info of "I o | tivities" content tur |        |

#### User can define his own contents type using Content Type menu with content's meta info.

SAMSUNG

2) Set "Columns Gap" to "No Gap"

"No Gap" means there's no gap between columns

- 3) Highlight one column and click the icon to edit column
- 4) Set "Widgets Space" to 0

Each column may contain multiple widgets, here set widgets space to 0

5) The designer pane is updated

# **Create a Static Content – Page Builder (Add Image)**

# Create a Static Content – Page Builder (Add Inner Section)

Inner Section is used to insert layout into other layout, which is flexible and powerful.

- 1) Drag & Drop Inner Section to right column
- 2) Edit Inner Section, set Content Width to "Full Width", and set Columns Gap to "No Gap"
- 3) Edit Column, set "Widgets Space" to 0
- 4) Right click Inner Section, click "Duplicate" to clone the same Inner Section
- 5) Refer to the current effect

# **Create a Static Content – Page Builder (Add Heading)**

| Additional JavaScript                 |           | > |

- 1) Click "Look & Feel" to show customize widgets
- 2) Click "Additional JavaScript" to show customize items
- 3) Input JavaScript code
  - Click "Execute" to check the current result

#### **Customize Front Page – Additional JavaScript**

- 1) Support jQuery by default, you can jQuery or \$.
- 2) The code will be executed once when document loaded.
- 3) The code will be executed for every page.
  - To add some logic for the target page, you need to judge this situation, like set a unique id in the page.
- 4) Use browser's develop tool to check the document structure and elements.

| Target              | Method                         |
|---------------------|--------------------------------|
| Get home menu items | \$("#lynkcore_homemenu_id>li") |
| Get page menu items | \$("#lynkcore_pagemenu_id>li") |

In additional JavaScript, you can use the following JavaScript functions, each of these functions acts as a standalone function unit.

1. For Adding background audio in code

| /**  |
|--|
| * Add background audio   |
| * @Param id  |
| * unique id for this audio element                                   |
| * @Param aduioSrc  |
| * audio src  |
| * @Param isAutoPlay  |
| * audio autoply attribute  |
| * @Param isLoop  |
| * audio loop attribute   |
| */   |
| Function lynk_add_background_audio(id, aduioSrc, isAutoPlay, isLoop) |

#### 2. Add background video

| /** |         |  |
|-----|---------|--|
| *   | Add bad | ckground video   |
| *   | @Param  | id   |
| *   |         | unique id for this video element                                     |
| *   | @Param  | videoSrc   |
| *   |         | video src  |
| *   | @Param  | isAutoPlay   |
| *   |         | video autoply attribute  |
| *   | @Param  | isLoop   |
| *   |         | video loop attribute   |
| */  |         |  |
| fun | ction   | lynk_add_background_video(id, videoSrc, isMuted, isAutoPlay, isLoop) |

#### 3. lynk\_homemenu\_item\_change\_effect

```
**
* When focus on homemenu item, the background video will be changed automatically.
* Each video has a thumbnail image.
  @param video map
         key: menu-item id
         value: video source
  @param thumbnail map
         key: menu-item id
         value: video thumbnail iamge
* @param welcome map
         key: menu-item id
         value: welcome message
  @param img_to_video_timespan (ms)
         the thumbnail image stays this value, then change to video
  @param fadeAnim fadeAnim time span (ms)
         when change menu-item, here use fadeIn/fadeOut anim, the timespan of fade anim effect
  @param ignored menuitem list
         menu-items that ignore the background video, like ENG, KOR languge switcher
function lynk homemenu item change effect(video map, thumbnail map, welcome map,
   img_to_video_timespan, fadeAnim_time_span, ignored_menuitem_list)
```

#### 4. lynk\_pagemenu\_item\_change\_effect

```
**
* When focus on pagemenu item, the background video will be changed automatically.
* Each video has a thumbnail image.
  @param video map
         key: menu-item id
         value: video source
  @param thumbnail map
         key: menu-item id
         value: video thumbnail iamge
* @param welcome map
         key: menu-item id
         value: welcome message
  @param img_to_video_timespan (ms)
         the thumbnail image stays this value, then change to video
  @param fadeAnim fadeAnim time span (ms)
         when change menu-item, here use fadeIn/fadeOut anim, the timespan of fade anim effect
  @param ignored menuitem list
         menu-items that ignore the background video, like ENG, KOR languge switcher
function lynk pagemenu item change effect(video map, thumbnail map, welcome map,
   img_to_video_timespan, fadeAnim_time_span, ignored_menuitem_list)
```

## Add new Product (5) – Set Attributes tab - 1

SAMSUNG

## User can set attributes which is used as additional product metadata or selectable options.

- 1) Click "Attributes" tab
  - Attributes tab is displayed on all kind of product type
- 2) Click the drop down menu
  - Global attributes and option for custom attribute are displayed.
  - Global attributes are added by Attributes page. Refer 'Manage Product Taxonomies' chapter.
- 3) Click an option

### If 'Custom product attribute' option is selected,

- 4) Input attribute name
- 5) Set attribute's options
  - Visible on the product page
  - Used for options : Guests can select this attributes as option when order the product.
  - Use numeric value
- 6) Input values
  - If 'Use numeric value' is checked, input boxes for numeric value options are displayed.

Below options are displayed on Variable product type

- Used for variations : If this option is checked, it is available as an option for variations. (Refer Set Variation tab)

If 'Use numeric value' option is checked, 'Used for variations' option is disabled.

Used for variations

🕑 Use numeric value

## **Global product attribute**

- If one of global attributes is selected,
- 4) Name of the attribute is displayed.
- 5) Set attribute's options
  - Visible on the product page
  - Used for options : Guests can select this attributes as option when order the product.

SAMSUNG

- 'Use numeric value' option is not available on global attributes
- 6) Input values
  - If 'Use numeric value' is checked, input boxes for numeric value options are displayed.

Below options are displayed on Variable product type

- Used for variations : If this option is checked, it is available as an option for variations. (Refer Set Variation tab)

## Add new Product (6) – Set Variations tab

- 1) Click "Variations" tab
  - Attributes tab is displayed on only 'Variable product' type.
- 2) Click the drop down menu
  - Add variation : add a variation
  - Create variations from all attributes

: This will create a new variation for each and every possible combination of variation attributes (max 50 per run).

SAMSUNG

- 3) Select an option
- 4) Click 'Go' button
- 5) Set Default Form Values

- These are the attributes that will be pre-selected on the frontend.
- 6) Set values of each variations
- 7) Click the button of a variation
- B) Input detail information of the variation
  - SKU : SKU refers to a Stock-keeping unit, a unique identifier for each distinct product and service that can be purchased.
  - Stock status : Controls whether or not the product is listed as "in stock" or "out of stock" on the frontend.
  - Description : Enter an optional description for this variation.
- 9) Click 'Save changes' button

- 1) Click "Advanced" tab
  - Advanced tab is displayed on all kind of product type
- 2) Input Purchase note
  - Enter an optional note to send the customer after purchase.
- 3) Input Menu order
  - Custom ordering position
- 4) Check Enable reviews

# Add new Product (8) – Set other details

## Set short description

The description will be shown on contents as a product's information.

## Set product categories

Products can be filtered by the categories on archive pages. Categories can be added with 'Add new category' button.

| Parent category —<br>Add new category |
|---------------------------------------|

## Set product tags

Products can be filtered by the tags also same with category.

| Product tags              | ^ V • |
|---------------------------|-------|
|                           | Add   |
| Separate tags with commas |       |
| Choose from the most used | tags  |

## Set product image

Product's image can be selectable. It will be used as a main image for representing a product, also used as a thumbnail on contents

## Set product gallery

Product's images can be added to product's gallery. Those images can be displayed in product's detail page if there are no cross-sells or upsells.

# **Manage Product Taxonomies**

- Categories, Tags, Attributes

## Add new Category

Tags

### Products **Product categories** All Products Product categories for your store can be managed here. To change the order of categories on the front-end you can drag and drop to sort them. To see more categories listed click the "screen options" Add New link at the top-right of this page. 1 Categories Add new category Name Attributes The name is how it appears on your site. Slug The "slug" is the URL-friendly version of the name. It is usually all lowercase and contains only letters, numbers, and hyphens. Parent category $\sim$ None Assign a parent term to create a hierarchy. The term Jazz, for example, would be the parent of Bebop and Big Band. Description The description is not prominent by default; however, some themes may show it. Display type Default $\sim$ Thumbnail Upload/Add image

Add new category

Δ

There are two ways to add categories. One is to be added in the product editor, and the other is as follows.

- 1) **Click "Categories" on the Store**
- 2) Input the category name

2

3

- 3) Input other options (optional)
- 4) Click the button to add new category.

## Add new Tag

# Products All Products Add New Categories Tags Attributes

### Product tags

Add new tag

### Slug

The "slug" is the URL-friendly version of the name. It is usually all lowercase and contains only letters, numbers, and hyphens.

### Description

The description is not prominent by default; however, some themes may show it.

There are two ways to add tags. One is to be added in the product editor, and the other is as follows.

- 1) Click "Tags" on the Store
- 2) Input the tag name

3

- 3) Input other options (optional)
- 4) Click the button to add new tag.

## Add new Attribute

### Attributes

#### Add new attribute

Attributes let you define extra product data, such as size or color. You can use these attributes in the shop sidebar using the "layered nav" widgets. Name Name for the attribute (shown on the front-end). Slug Unique slug/reference for the attribute; must be no more than 28 characters.

### Enable Archives?

Enable this if you want this attribute to have product archives in your store.

### Default sort order

### Custom ordering 🗸

Determines the sort order of the terms on the frontend shop product pages. If using custom ordering, you can drag and drop the terms in this attribute.

Add attribute

### There are two ways to add attributes.

One is to be added in the product editor, and the other is as follows.

- 1) Click "Attributes" on the Store
- 2) Input the attribute name
- 3) Input other options (optional)
- 4) Click the button to add new attribute
  - The attribute is added to the list table

### Product Size

### Attribute terms can be assigned to products and variations.

Note: Deleting a term will remove it from all products and variations to which it has been assigned. Recreating a term will not automatically assign it back to products.

### Add new Size

The description is not prominent by default; however, some themes may show it.

# 5) Click "Configure terms" to add terms to the attribute

- 6) Input the attribute term name
- 7) Input other options (optional)
- 8) Click the button to add new term
  - The term is added to the attribute

# **Create eCommerce Type pages**

## Create an Archive page for Products

SAMSUNG

## **Create a page for My Page**

SAMSUNG

- 1) Click "Add New" to enter basic page editor UI.
- 2) Input page title.
- 3) Select "My Page" of eCommerce Type.
- 4) If you want to use page menu, select 'Enable'.
- 5) Click the button to publish the page.

# **Create posts for eCommerce products**

# **Automatically Create Posts for eCommerce Products**

What are posts for eCommerce products?

- If you want to display products on the shop page of a guest device, you need to create posts for the products.

The post are displayed through the menu added as archive page.

### You can also add posts directly as a menu.

When you create or update an archive page in the form of eCommerce type, posts for products(only which are archived by the archive page) of the archive page are automatically created.

If new products that can be archived from the archive page are created after updating the archive page, product posts are automatically created when a guest access to the archive page of the shop.

## Manually Create Posts for eCommerce Products

### You can also manually create a post for products.

## **Configure eCommerce Products posts data**

. .

### User can configure Preview data(For TV Eden Preview) Contents Templates in Product Posts

| Posts All Posts Add New Categories Tags Content Types |   | Sample Product   | Content Template  |
|---|---|------------------|-------------------|
|   | Meta Info                                       |                  | Preview Data      |
|   | Product Data                                    | Sample Product V | Set Preview Image |
|   | Product Type Product Category(s) Product Tag(c) | simple           | Preview Title     |
|   | Description in short                            | Fitness Center   | Preview Sub-Title |
|   | Product image                                   |                  |                   |

When user create new posts for product manually or edit product posts which is created automatically, can configure preview data for LYNK Cloud Preview configuration

- 1) Select Image which is used as preview thumbnail image
- 2) Configure Preview title and Sub title
